

**Data Handling**

- Arithmetic mean is one of the representative value of data.
- The mode of a set of observations is the observation that occurs most often.
- Median refers to the value which lies in the middle of the data with half of the observations above it and the other half below it.
- A bar graph is a representation of numbers using bars of uniform widths.
- Double bar graphs help to compare two collections of data at a glance.
- To know the meaning of probability i.e. chance.
