

1. Define air pressure.
2. What is wind and how does it move?
3. What causes sea breeze and land breeze?
4. Name any two effects of wind pressure.
5. What is the "eye" of a cyclone?
6. How does the sun help in the formation of wind?
7. Give three safety tips during a cyclone.
8. Differentiate between storms and cyclones.
9. Write three effects of strong winds.
10. Explain the role of temperature in wind movement.
11. Describe how a cyclone forms with a diagram.
12. What happens during a thunderstorm? Describe the process.
13. Why are windmills and ship design important examples of pressure effects?
14. Explain how wind pressure helps or harms in real-life events.
15. Draw and explain the process of land and sea breeze formation.
